Hi Matt,

Thank you for reviewing the HVAC test and balance report for the Apple leased building. When you're back in the office, I'll set up a meeting for us to go over and if indoor air sampling should be conducted this winter.

Michael

Attached is my draft review of the TRW RTC and the attached test and balance report. There was insufficient information on the building layout (room and zone sizes), building exhaust, and operations to make many conclusions from the test and balance report. Also since the building layout/operation has been modified since this test and balance I am not sure how accurately it reflects current operations. It did seem odd to me that the environmental chambers were not on dedicated ventilation systems. Maybe it is a reflection of how the chambers are being used? Not sure if it would have any impact on VI, but more information on the HVAC system could be helpful.

Thanks  
matt

Bumping up means to move up as a reminder (I think the phase origin means to move something from down deep in the emails back up to the top). Nothing else is being requested by me. I think Chip has what he needs right now, but just wanted to send the reminder.

Thank you  
Michael

Greetings Michael,

Matt mentioned this to me, however, I am curious as to what "bumping up" means. Are you asking us to reprioritize other work? This gets very difficult to do as much of the QA Branch will be leaving for use or lose beginning next week and will not be around until after the new year. Matt is also gone in the field some days this week and next to accomplish other priority work. Let us know how we can support you given our time constraints and upcoming leave schedules.

Thanks,

Hi Mat,

AECOM / Northrop Grumman responded to my letter requesting additional SSDS and building information. Their response included HVAC test and balance information, is this something you can review in the next few weeks to month?

I also need to follow up with AECOM asking them to provide a timeline to address the additional items.

Thank you,  
Michael

On Aug 10, 2021, at 5:04 PM, Schulman, Michael <[Schulman.Michael@epa.gov](mailto:Schulman.Michael@epa.gov)> wrote:

Hi Kurt, thanks. we'll start at 08:00 then. I'll get to the site around 07:30 to 07:45. I have a briefing I need to give from 1-2 pm, so we'll either be done by then or Matt will fill in for me.

Regarding the NDA the EPA site attorney spoke to an Apple attorney and EPA is not going to sign the Apple NDA. Apple will send a letter to EPA saying that everything we create during the Site Walk (e.g., field notes, photos) is being claimed by Apple as CBI and we will treat it as such under our CBI regulations at 40 CFR Part 2. After the visit, we will send Apple back everything we created so they can then substantiate their claim. We will want to work with the Apple representative while onsite to minimize any creation of CBI. So, for example, if it's possible to take a photo at an angle that wouldn't be claimed as CBI that is probably what we'd want to do. Let me know if you have any questions.

Thank you,  
Michael

**To:** Kurt Batsel <[batsel@dextra-group.com](mailto:batsel@dextra-group.com)>  
**Subject:** Site visit: TRW Microwave Site 825 Stewart Drive building

Hi Kurt,

EPA requests a site walk and inspection visit of the TRW Microwave Site 825 Stewart Drive building. Can you arrange for EPA access to the building from the current property owner, which I believe is GI DC Sunnyvale LLC? Myself and Matt Plate with EPA request reasonable access to visit the items addressed in the attached annual inspection memo and the 2014-2015 building mitigation measures that addressed the potential for vapor intrusion into the building, which included:

- The sub-slab depressurization system that was installed underneath the site building to vent vapors to the atmosphere.
- The building's concrete slab and cracks that were sealed to prevent vapor intrusion. As well as any building concrete slab penetrations (e.g., from pipes or seams in the building).
- Past indoor air sampling locations.
- The location where contaminated soil was excavated from underneath the building.

- The spaces between the walls of the three sections of the buildings that were sealed in 2014-2015.
- The emulsified vegetable oil in-situ bioremediation system.
- The location of groundwater monitoring wells.

EPA also wants to review any post 2014-2015 building modifications or changes to the building.

Can you get back to me this week with some dates for a site visit in August? Northrup Grumman and your consultant are also invited to attend, understanding that there may be COVID-19 related restrictions in how many people can visit the building or congregate. I am available for a site visit any week, except for August 9-11 and the week of August 23-27 and Matt Plate typically has limited availability on Fridays.

Feel free to call me to go over,  
Thank you,

---
